## DM Calibration Products

Chris Waters

DMTN-148

Latest Revision: 2020-03-26

## Abstract

The goal of this tech note is to provide a plan for the handling of calibration products in the Gen-3 Butler environment, including the construction, validation, certification, and deprecation. This process is equally challenging with the current Gen-2 Butlers, but the hope is that with a clear goal in mind, the currently existing calibrations, for all calibration types and cameras, can be migrated to a common design that will be shared with Gen-3. The current state, the end goal, and the transition steps between these are defined.
